D The United Nations (UN) World Health Organization (WHO) has admitted that “monkeypox” is actually a “side effect” of Covid mRNA “vaccines.”

The confession is on the WHO's [VigiAccess website](#), writes [Frank Bergman](#) .

The website contains a database of all known side effects of all medicines and vaccines approved for public use.

Under “possible side effects” for the Pfizer BioNTech COVID-19 vaccine, the WHO lists “monkeypox,” “chickenpox” and “cowpox” among hundreds of other conditions.

They are listed under “infections and plagues” that emerge as “side effects” of the Pfizer mRNA vaccine.

The screenshot shows the VigiAccess website interface. At the top, there is a navigation bar with the VigiAccess logo on the left and the World Health Organization logo on the right. Below the navigation bar, there is a list of adverse drug reactions (ADRs) for COVID-19 vaccines. The list is organized into categories, with 'Infections and infestations (5%, 653 232 ADRs)' expanded to show a list of specific conditions. An arrow points to 'Monkeypox (6)' in this list.

Category	Percentage	Number of ADRs
Eye disorders	1%	170 010 ADRs
Gastrointestinal disorders	7%	960 538 ADRs
General disorders and administration site conditions	26%	3 405 536 ADRs
Hepatobiliary disorders	0%	12 937 ADRs
Immune system disorders	1%	121 481 ADRs
Infections and infestations	5%	653 232 ADRs
COVID-19		386 673
Influenza		49 884
Herpes zoster		44 876
Nasopharyngitis		35 482
Pneumonia		14 286
...		
Leprosy		6
Listeriosis		6
Lower respiratory tract infection viral		6
Malaria relapse		6
Mastitis bacterial		6
Meningococcal infection		6
Monkeypox		6
Myocarditis septic		6
Neurosyphilis		6
Load more...		
Injury, poisoning and procedural complications	3%	369 200 ADRs

The website is a searchable database that does not provide direct links to the information.

However, you can find the information yourself by following these steps:

- Visit the [VigiAccess](#) website
- Scroll down and click on "Search database"
- Search for "BioNTech"
- In the list of search results, click on "Pfizer BioNTech Covid-19 Vaccine".
- Click "Ok" in the dialog box that appears
- Under "Reported potential side effects" click on "Infections and infestations"
- Scroll down and keep clicking on "Load More" until you see "Smallpox (15)"
- Keep scrolling and clicking "Load More" until you see "Monkeypox (6)" and "Cow pox (5)".

Note that the database was working at the time of publication.

However, most of the time, when we draw attention to such things, it is quickly swept under the carpet.

However, this is not the first time that monkeypox has been linked to Covid vaccines.

As Slay News recently [reported](#), a renowned German doctor has spoken out to warn the public that the monkeypox "outbreak" is a hoax and that the "symptoms" are actually side effects of Covid mRNA vaccines.

Dr. Robert Malone: Monkeypox is "psychological warfare" by "evil"!

Dr. Wolfgang Wodarg issued the warning in a new [whistleblower interview](#) with the Austrian newspaper AUF1.

He explains that reports from the World Health Organization (WHO) of a " [global emergency](#) " for monkeypox are part of a scare campaign to frighten the masses.

Wodarg says globalists are trying to cover up the negative health effects of Covid injections while trying to make a profit from testing and treating monkeypox.

Infowars' Alex Jones [shared a clip](#) of the interview translated from German to English.

Jones says the video comes from a German article titled:

"Doctor: Monkeypox is actually shingles, a side effect of the Covid vaccines."

Look:

These shocking developments emerged after the US Food and Drug Administration (FDA) made a shocking admission about the monkeypox "vaccines."

As Slay News [reported](#) , the FDA has quietly admitted that people who have not been vaccinated for monkeypox could experience "serious complications," including "death," if they come into "close contact" with people who have been vaccinated for the virus.

The FDA approved the [monkeypox vaccine](#) (ACAM2000) for [use](#) in U.S. citizens on August 29.

However, the vaccine has been around for several years as the injection first developed to tackle smallpox.

It was originally approved by the FDA in 2007, but was re-approved for use against monkeypox in August of this year.

However, the injection carries a risk of serious side effects, including death.

English

Alarmingly, those risks are not limited to those receiving the shots, as the side effects can also occur in unvaccinated people who have "physical contact" with the vaccinated.

Monkeypox - Population control by infecting immunocompromised people with smallpox using the COVID-19 vaccine?

A document published by the FDA reveals that serious adverse events can be spread through "[shedding](#)" to the unvaccinated.

On page 1 in the "Warnings and Precautions" section, the document states:

"[The vaccine] is a live vaccinia virus that **can be transmitted to persons in close contact with the vaccinated person and the risks for contacts are the same as for vaccinated persons**."

In the first section, "Serious complications," of the package insert, death is listed as a "side effect" of the monkeypox vaccine.
