The American Chestnut tree was the backbone of Appalachia for hundreds of years. It provided food for both animals and humans, timber for construction, and firewood for fuel. It was literally to Appalachia what oil is to everyone today.

A JEEEEWWWW in New York imported some Chinese Chestnut trees that infected the Appalachian trees with a blight (fungus) that absolutely destroyed these majestic trees.

Within a few years Appalachia was thrown into a massive depression that it hasn't recovered from to this day.

Supposedly the JEEEEWWWW who brought in the Chinese disease did it by accident (to feed pandas or some shit at the NY Zoo). But I strongly suspect that it was no accident. It was deliberate bio-warfare on the White Appalachian people by destroying the backbone of their existence.

Hey, they poisoned wells in the Middle Ages killing 2/3 of White Europeans, and pawned off the now-accepted lie that it was Bubonic Plague. Nope, JEEEEWWWS caused the Black Death on purpose. It was a deliberate, planned genocide of Europeans by JEEWWWS.

The Kalergi Plan is just the latest JEEEEWWWW plan to exterminate White people. They've been trying this for thousands of years ... way before Kalergi and the latest attempted White genocide.

For more about the amazing American Chestnut tree watch the following:
