

More Embalmers Speak Out About Abnormal Blood Clots Found In Recently Deceased....

The legacy media largely ignoring this story is not changing the fact that *something* is causing this increase in anomalous blood clots found in corpses.

[Embalmers Have Been Finding Numerous Long, Fibrous Clots That Lack Post-Mortem Characteristics...](#)

Several embalmers across the country have been observing many large, and sometimes very long, “fibrous” and rubbery clots inside the corpses they treat, and are speaking out about their findings. It’s not yet known if the cause of the new clot phenomenon is COVID-19, vaccines, both, or something different. The *Epoch Times* received videos and photos of the anomalous clots, but did not upload them due to the level of gore.

....Richard Hirschman, a licensed funeral director and embalmer in Alabama, recalled that he has been in the trade since the tragedy of 9/11.

“In 20 years of embalming, I had never seen these white fibrous structures in the blood, nor have others in my field. In the past year, I have seen these strange clots in many different individuals, and it doesn’t seem to matter what they die of, they often have similar substances in their blood. This makes me very concerned because if something is wrong in the blood, it begs the question: is something causing people to die prematurely?” Hirschman said.

“Prior to 2020, 2021, we probably would see somewhere between 5 to 10 percent of the bodies that we would embalm [having] blood clots,” Hirschman told *The Epoch Times*. “We are familiar with what blood clots are, and we’ve had to deal with them over time,” he said.

He says that now, 50 to 70 percent of the bodies he sees have clots. “For me to embalm a body without any clots, prior to all of this stuff, it’s rare,” Hirschman said. “The exception is to embalm a body without clots,” he noted.

...Wallace Hooker is an expert embalmer who lectures on a national level as well as internationally. He has a significant presence on social media, especially on some private embalming websites.

Hooker sees about 300 bodies a year, and has seen numerous clots of the same kind Hirschman has.

He told *The Epoch Times* that “people are seeing these [clots], it’s just not Richard and me and Anna [Foster],” another embalmer.

“I have people sending me photos almost every week of what they’re seeing,” Hooker said.

After he stated that he suspected the vaccines could have something to do with the clots, he was dismissed by some people who said he wasn’t a qualified doctor who could comment on the cause.

Hooker also suspects that the so-called Sudden Adult Death Syndrome could have some relation to these clots.

...Larry Mills, a licensed embalmer and funeral director in the state of Alabama, has been in the funeral business since 1968 and has been involved with the embalming procedure since the beginning of his career.

“We as embalmers are seeing some strange clots since the COVID outbreak. These clots are very rubbery feeling and very long as they exit the veins that we use during the embalming procedure. They really appear to be like earthworms. I have never seen this in my career until now,” Mills told *The Epoch Times*.

Other funeral directors or embalmers wanted to maintain anonymity, because they don’t know how the funeral houses would react.

“I can tell you with certainty that the clots Richard has shown online are a phenomenon that I have not witnessed until probably the middle of last year. That is pretty much all I have to say about it. I have no knowledge as to what is causing the clots, but they did seemingly start showing up around the middle of 2021,” another embalmer, licensed since around 2021, told *The Epoch Times*.

“You can [be] rest assured that the clots we are seeing are not something we ever saw prior to last year,” he added.

...Anna Foster, a licensed funeral director from Missouri, explained that she started seeing more frequent and larger clots after the COVID pandemic started.

“I often sit with the families to make the arrangements. Families tend to tell us about the lead-up to the individual’s death, and knowing I embalmed the person the night before led me to keep track of these cases,” Foster told *The Epoch Times*.

“In the beginning, none had ever been diagnosed with COVID, but they had all been vaccinated. Later, a couple had had COVID but not recently, and they were also vaccinated,” she continued.

“Most of the individuals I embalmed and saw these changes were over the age of 75 and lived in nursing facilities, except for two men in their early fifties. One of these men was a friend of ours, and he had the vaccination, and after his second dose, he began to feel ill. His wife took him to their family doctor, and the doctor immediately sent him to the ER because he was showing signs of a thrown clot or a heart attack. He went into cardiac arrest while transferring, and he died shortly after. He was embalmed right after death, and the clotting was by far unexplainable, and this is when I began to feel very concerned about this vaccination and canceled my thoughts of receiving the

vaccination myself," Foster said.

In one case, she pulled out clots that were 2 feet in length and "several more" that were at least 12 inches—from the same body.

"I know before the vaccination, my embalming cases did not have the amount of clotting I see now, and very rarely would you find many with fibrin attached; now, it is at least ten times the amount, if not more," she said.

A licensed funeral director and apprentice embalmer who has been in the funeral industry for over 3 years has participated in over 200 embalmings.

"During May of 2021, the embalming process became more difficult. The normal draining of the blood was almost halted by thick, jelly-like blood. Instead, of the blood flowing normally down the table, it was very vicious. So thick, that it would not wash down the table without assistance," she told The Epoch Times.

As time has passed since the vaccines were distributed she has seen more of the "thick blood" as well as the "thick, fibrous-like clots." The clots are not only clotting the veins but the arteries as well.

She explained that normal embalming usually takes around 2 hours, but now it can take up to 4 hours.

"The distribution of the arterial fluid is being blocked by these clots and making my job more difficult. The clots are so large and thick that with the flow of arterial solution, massage and manipulation of the artery or vein is necessary for removal," she continued.

....Mike Adams, who runs an ISO-17025 accredited lab in Texas, analyzed clots in August and found them to be lacking iron, potassium, magnesium, and zinc.

Adams's lab uses inductively coupled plasma mass spectrometry (ICP-MS), triple quadrupole mass spectrometer, and liquid chromatography-mass spectrometry, usually testing food for metals, pesticides, and glyphosate.

"We have tested one of the clots from embalmer Richard Hirschman, via ICP-MS. Also tested side by side, live human blood from an unvaccinated person," Adams told The Epoch Times.

He found that the clots are lacking key elements present in healthy human blood, such as iron, potassium, and magnesium, suggesting that they are formed from something other than blood.

Adams is joining analytic forces with more doctors and plan to invest out of their own pocket in equipment in order to further determine their composition and probable causation.

The string-like structures differ in size, but the longest can be as long as a human leg and the thickest can be as thick as a pinky finger.
