Translation: US kissinger petrodollar economy has crashed and wall st cannot afford US citizens to own low cost gasoline powered cars!

Global warming, climate change are just excuses. The sudden roll out of the plandemic and EV car conversion is that [USA lost the petrodollar to Iran](#) last year after getting its base bombed with no credible military response. US citizens can longer afford the petrodollar quality of life... two gasoline powered cars in every home and massive flock of chickens in every jumbo pot like the world before 2020 january.

The US economy is in a controlled implosion, you will only rent in the future...own nothing! your car will be an electric uber driven by an immigrant who will eventually be replaced by some sort of dystopian AI system. Your food will be genetically modified slop from bill gates farm that will have mRNA accelerated aging proteins encoded into the genes of the food crop, just like monsanto's round up tomato and your age will be restricted to 40+ after which you die of some future variant of COVID! Welcome to techno feudalism!
