Decongestant ingredient in popular products does not work, FDA concludes

Advisory panel reviewed studies of phenylephrine, an active ingredient in Benadryl, Mucinex, Sudafed PE and Tylenol

A common decongestant ingredient of numerous popular over-the-counter cold and flu remedies does not work, the Food and Drug Administration (FDA) concluded on Tuesday.

An [advisory panel](#) spent two days looking at studies of phenylephrine, an active ingredient in well-known medicines including Benadryl, Mucinex, Sudafed PE and Tylenol, and reported to the FDA that it is no more effective than a placebo.

The announcement raises the likelihood of the medicines disappearing from shelves this fall while manufacturers scramble to formulate alternative formulas without it, according to [the New York Times](#), which first reported the development.

The FDA must now decide whether to set up a vote to ban the ingredient altogether.

“I think we clearly have better options in the over-the-counter space to help our patients, and the studies do not support that this is an effective drug,” said Maria Coyle, chair of the advisory panel and associate professor of pharmacy at Ohio State University.

The Guardian has contacted Reckitt, the parent company of Mucinex, and Johnson & Johnson, which manufactures Benadryl, Sudafed and Tylenol, for comment.

The FDA, the Times said, insists that phenylephrine, which is present in both adult and children’s versions of cold medicines, is safe to take. And it is still considered effective if taken as a nasal spray, if used in surgery, or to dilate the eyes.

But multiple studies assessed by the FDA’s non-prescription drugs advisory committee found that it is destroyed in the gut, making it useless when taken orally, whether in tablet, capsule or liquid form.

Concerns over its effectiveness surfaced publicly in 2007, when University of Florida pharmacists urged the FDA to take the drug off the market. “The bottom line is quality research has told the true story of phenylephrine,” Dr Leslie Hendeles, one of the original research group, and now professor emeritus at the university, told the Times on Tuesday.

In [a statement](#) released immediately before the FDA panel’s meeting, the Consumer Healthcare Products Association (CHPA), which represents drug manufacturers, argued that the ingredient was effective, citing [a survey](#) that claimed 83% of Americans found it helped symptoms, and insisting it played “a critical role in public health”.

“Oral phenylephrine has been relied upon as a beneficial nasal decongestant by American families for decades, and FDA has repeatedly concluded the ingredient is safe and effective,” the statement said.

“This determination, established by multiple double-blind, placebo-controlled trials and supported by two previous FDA advisory panels, has also been validated by a meta-analysis of relevant clinical studies.”

The CHPA also warned against “significantly negative unintended consequences” of removing products containing phenylephrine from the market.

Consumers, the group said, would be less likely to spend time seeking medical advice from doctors or pharmacists if they were unable to easily purchase an over-the-counter remedy.

And it notes that products containing the alternative decongestant medicine pseudoephedrine are less readily available because they are subject to purchase restrictions in many states, largely because it can be illegally processed into methamphetamine.

“This poses unequal burdens for consumers living in areas with limited access to traditional retail options based on geography, schedules, or socioeconomic factors,” it said.

“Simply put, the burdens created from decreased choice and availability of these products would be placed directly onto consumers and an already-strained US healthcare system.”

I hope you appreciated this article. Before you move on, I was hoping you would consider taking the step of supporting the Guardian’s journalism.

From Elon Musk to Rupert Murdoch, a small number of billionaire owners have a powerful hold on so much of the information that reaches the public about what’s happening in the world. The Guardian is different. We have no billionaire owner or shareholders to consider. Our journalism is produced to serve the public interest - not profit motives.

And we avoid the trap that befalls much US media - the tendency, born of a desire to please all sides, to engage in false equivalence in the name of neutrality. While fairness guides everything we do, we know there is a right and a wrong position in the fight against racism and for reproductive justice. When we report on issues like the climate crisis, we’re not afraid to name who is responsible. And as a global news organization, we’re able to provide a fresh, outsider perspective on US politics - one so often missing from the insular American media bubble.

Around the world, readers can access the Guardian’s paywall-free journalism because of our unique reader-supported model. That’s because of people like you. Our readers keep us independent, beholden to no outside influence and accessible to everyone - whether they can afford to pay for news, or not.

If you can, please consider supporting us just once from \$1, or better yet, support us every month with a little more. Thank you.
